

# Password for Webinterface forgotten

## Problem

One of my customers forgot the password for LoxBerry's webinterface... Access via SSH/ROOT is still working. How can I reset the password for LoxBerry's webinterface?

## Solution

As long as you have access via SSH, you can reset the password easily. Username and Password for the webinterface are stored in `/opt/loxberry/config/system/htusers.dat`

To reset Username and Password to the default settings, [please login via SSH/Putty](#) and delete the `htusers.dat` file. After that a reboot is needed.

```
rm /opt/loxberry/config/system/htusers.dat sudo reboot
```

After a reboot the file will be restored to the default settings automatically. Username and Password are set to "loxberry".
