

System Time

In *System Time* you can configure, if LoxBerry should acquire its system time from internet time servers (NTP server), or from the Loxone Miniserver. It is more accurate to sync LoxBerry with an internet time source. Additionally, you can configure the timezone of your location.

If you configured to use an internet time source, you can edit the NTP server to request the time. The pool timeservers are a network of failsafe NTP servers. Use [0.pool.ntp.org](https://www.pool.ntp.org/) to use that network.

You can refresh the requested time with the refresh button. To debug problems with LoxBerry time or timezone, open the Log File.
