

# Widget Translate

The screenshot shows the 'System Translation' tab of the Widget Translate application. At the top, there's a navigation bar with tabs: 'System Translation' (selected), 'Plugin Translation', and 'Translation Guide'. Below the navigation bar, there's a toolbar with buttons for 'Select language file...', 'Source language' (set to English (US)), 'Enter your destination language' (set to German), 'Click to reload', and 'When you are finished...'. A dropdown menu 'Language... (none)' is open. The main area is a table titled 'System Translation' with columns: 'KEY', 'Source language', and 'Destination language'. The table contains five rows of common LoxBerry UI elements:

KEY	Source language	Destination language
COMMON-LOXBERRY_MAIN_TITLE	Loxberry	Loxberry
COMMON-BUTTON_CANCEL	Cancel	Abschließen
COMMON-BUTTON_CLOSE	Close	Schließen
COMMON-BUTTON_EXIT	Exit	Austritt
COMMON-BUTTON_OK	OK	OK

The Translate widget can be used by every LoxBerry user to translate the LoxBerry core system, and even every supporting plugin, to your native language. Use the navigation bar to switch between **System Translation** and **Plugin Translation**, and select the desired language file to translate.

**Before you begin, you absolutely should read the [Translation Guide](#)!**
