Label "article_maintenance_requested" (English)

Plugin articles with this label should be double-checked, especially the content of the table on the top.

In the row "Download" only **direct download links** to the **zip file** should be placed. If this row is missing in your plugin, please look into another plugin and create the column on the same place. The link in the "Download" row should **not** link to the forum, nor to the release list or the repository frontpage. Also, in the column no text should be placed, and only one single link.

Background of this formality:

1. We will force the direct download by url in the Plugin Management widget, as too many errors occour on uploading with different browsers. Users should directly get the link to paste it to the URL field, and they should not need to seek for the download.
2. Possibly in the future, we offer an automatic download/installation of plugins within the UI, and therefore we need a clean data structure. As we don't want to move to a clumsy and unflexible data management system, where dropping a plugin would be a pain, we all together need to attempt to get a clear structure in this flexible wiki, to get things automated.
